Storie che parlano di persone e paesaggi, di ore piacevoli e spensieratezza, di intimità e condivisione. Narrazioni di una quotidianità vissuta in pienezza, a contatto con la natura e i suoi elementi. Con luci, forme, sapori, colori e profumi che rimangono impressi nel momento e nel ricordo.

Stories that tell of people and places, of pleasant, carefree hours, of intimacy and sharing. Tales of everyday life, lived to the full, in touch with nature and all its elements. With lights, shapes, flavours, colours and scents that mark the moment and remain imprinted on the memory.

Life's pleasures and customs, open-air rituals that give us fulfilment and energy: a relaxed awakening, a rejuvenating break, an opportunity to spend time with others, a convivial experience. In richness of spirit and amongst the beauty of the environment, in the name of positive emotions.

Piaceri della vita e abitudini, riti all'aria aperta che donano appagamento ed energia: un risveglio rilassato, una pausa rigenerante, un'occasione di incontro, un'esperienza di convivialità. Nella ricchezza dello spirito e nella bellezza dell'ambiente, all'insegna di emozioni positive.

Moments that are a gift, to dedicate to ourselves or to others, as we wish. Generous, complete, intense moments of awareness and sharing. Moments of sincerity, which arise spontaneously and become lively, with enjoyment guiding the sensations.

Momenti che sono un dono, da dedicare a se stessi o agli altri, in libertà. Tempi generosi, completi, intensi, fatti di consapevolezza e accoglienza. Attimi sinceri, che nascono spontanei e si fanno vivaci, con la piacevolezza a guidare le sensazioni.

Orizzonti come casa. Panorami aperti e luminosi per natura, da scoprire, scegliere e contemplare. Luoghi che si fanno scenari per racconti in cui essere protagonisti, immersi nell'armonia e nel benessere dei sensi.

Horizons as home. Open and naturally bright landscapes, just waiting to be discovered, chosen and contemplated. Places that become the settings for stories in which you are the protagonists, stories of harmony and general wellbeing.

This change does not affect its original characteristics in any way. The grey patina can be avoided or removed by specific maintenance. |

This change does not affect its original characteristics in any way. The grey patina can be avoided or removed by specific maintenance. |

This change does not affect its original characteristics in any way. The grey patina can be avoided or removed by specific maintenance. |  |

Exposure to the weather creates an oxidation patina, one or two millimetres deep, on the wood surface, making it fade to a silver-grey colour. This change does not affect its original characteristics in any way. The grey patina can be avoided or removed by specific maintenance. |                                                                                           |                                                                                            |                                                                                              |                                                                                            |                                                                                           |                                                                                             |                                                                                          |

|  Teak | Structure    | Powder-coated stainless-steel frame. Curved teak slats and rockers. Exposure to the weather creates an oxidation patina, one or two millimetres deep, on the wood surface, making it fade to a silver-grey colour. This change does not affect its original characteristics in any way. The grey patina can be avoided or removed by specific maintenance. |  |

Exposure to the weather creates an oxidation patina, one or two millimetres deep, on the wood surface, making it fade to a silver-grey colour. This change does not affect its original characteristics in any way. The grey patina can be avoided or removed by specific maintenance. |                                                                                            |                                                                                            |                                                                                             |                                                                                               |                                                                                             |                                                                                            |                                                                                              |                                                                                           |

Exposure to the weather creates an oxidation patina, one or two millimetres deep, on the wood surface, making it fade to a silver-grey colour. This change does not affect its original characteristics in any way. The grey patina can be avoided or removed by specific maintenance. |                                                                                           |                                                                                            |                                                                                           |                                                                                            |                                                                                             |                                                                                          |  |

| Product type    | Modular sofa, sofa, dining chair with or without arms, dining table and coffee table.                                                                                                                                                                                                        |
| Structure       | Teak. Exposure to the weather creates an oxidation patina, one or two millimetres deep, on the wood surface, making it fade to a silver-grey colour. This change does not affect its original characteristics in any way. The grey patina can be avoided or removed by specific maintenance. |
| Seating support | For sofas and chairs, the teak is combined with Batyline structural fabric.                                                                                                                                                                                                                  |
| Top             | Matt stoneware or glazed stoneware.                                                                                                                                                                                                                                                          |

Hydro Draining Cushions  
Cuscini Idrodrenanti

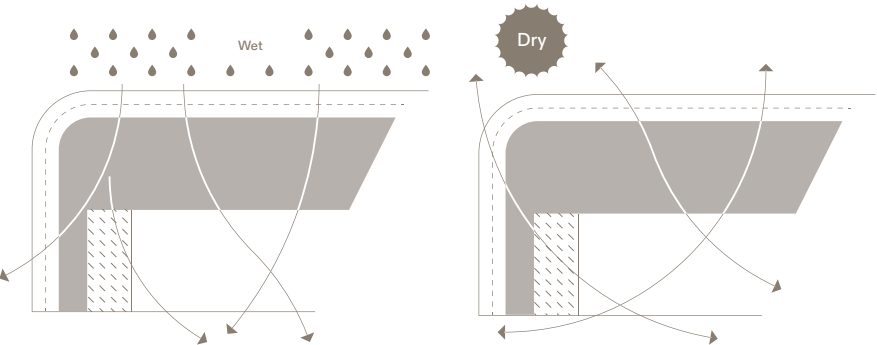

EN The hydro-draining technology used for RODA cushions leads to padding that lets the water run out easily and quickly. Abundant inner-cushion air circulation is another factor that promotes swift, complete drying to avoid mildew and deterioration. Hydro-draining padding uses open-cell polyurethane enclosed in breathable mesh. In particular, the backrest cushions' padding is enveloped by a technical mesh that divides the fibre into sections to obtain variable densities. This inner structure improves comfort and holds its shape over time. The underside of the seat and backrest cushions is equipped with mesh that encourages water to drain out and air to flow in.

IT La tecnologia idrodrenante applicata ai cuscini RODA si basa sulla capacità dei materiali utilizzati di drenare velocemente l'acqua e di consentire un veloce e abbondante ricircolo di aria. In questo modo si ottiene un'asciugatura rapida e completa dell'imbottito, evitando il deterioramento del prodotto e la comparsa di muffe. I cuscini idrodrenanti sono realizzati con un'imbottitura drenante a cella aperta, avvolta da una rete traspirante; in particolare, l'imbottitura dei cuscini di schienale è racchiusa da un involucro di rete tecnica che divide la fibra in diverse "camere" per ottenere densità variabili; questa struttura interna favorisce il comfort e il mantenimento del volume nel tempo. La parte inferiore dei cuscini di seduta e di schienale prevede una rete che consente la fuoriuscita dell'acqua e il passaggio dell'aria all'interno del cuscino.

Hydro Draining Technology applied  
to the upholstered collections  
Tecnologia Idrodrenante applicata  
alle collezioni imbottite

EN The upholstered RODA furniture collections feature high-performance breathability and water-draining capacity. Maximum levels of effectiveness are reached by combining open-cell polyurethane of different densities in a way that makes water travel out immediately while ensuring soft comfort and support. Three-dimensional netting envelopes the fast-drying padding of some collections, offering great aesthetics: the furniture has finished, handsome appearances and can be used even without fabric slip-covers. The frames supporting the cushions are generally made of powder-coated aluminium, meaning they are light-weight, robust and weather-resistant.

IT Le collezioni imbottite approfondiscono il concetto di traspirabilità dei cuscini idrodrenanti, portandolo al massimo livello di complessità ed efficienza, combinando poliuretani a cella aperta di differenti densità, per consentire il drenaggio dell'acqua e assicurare un perfetto comfort di seduta. La rete 3D, che riveste e contiene l'imbottitura drenante di alcune collezioni, conferisce un aspetto gradevole e completo al prodotto, anche in assenza della fodera tessile. Le strutture, su cui vengono applicati gli imbottiti, sono generalmente prodotte in alluminio verniciato a polvere, per garantire maggiore leggerezza, robustezza e totale resistenza agli agenti atmosferici.

<sup>EN</sup> RECYCLED FABRICS High-quality ecological acrylic yarns obtained by upcycling fabric offcuts from the awning industry. Composed of 50% recycled acrylic fibre, these textiles are generated through an innovative process that uses less water, less chemicals, and emits less carbon dioxide than producing them new.

<sup>IT</sup> TESSUTI RICICLATI Filati acrilici ecologici di alta qualità, ottenuti – grazie ad un innovativo processo di up-cycling – dagli scarti generati dall'industria delle tende da sole. Composti al 50% da fibre riciclate, vengono generati da una lavorazione che utilizza meno acqua e prodotti chimici, oltre a emettere meno CO<sub>2</sub>.
